Participate in Research
What do you think about a Clinical Quality Registry focused on Vascular Access?

Principal Investigator:
Professor Claire Rickard

Research Area:
Alliance for Vascular Access Research, Menzies Health Institute Queensland, Griffith University.

Are you a policy maker or manager responsible for vascular access and intravenous therapy? Are you interested in improving the quality and safety of vascular access for patients? Consider participating in our study.

What is this study about:
• Currently there is no agreed, validated data set available to allow routine monitoring of peripheral and central venous catheters.
• Our aim is to increase our understanding of the feasibility, usefulness and viability of a Vascular Access Registry through consultation with individuals to gain your perspective on what information would be important in this registry.

What’s involved?
This study involves completing a short informal interview that would take around 30 minutes.
• Interview can be over the phone, via the web or face-to-face
• All responses will be kept confidential
• Ethics approval has been granted from Griffith University (GU2018/329)
• Relevant information about the study and the participant’s role will be provided to those interested in participating.

What are the benefits of participating?
You would be contributing to improving health care through research.
